

Making an Electricity Choice

Choosing the right electricity supplier and supply pricing option can be a daunting task. The typical customer often feels as though they lack the critical information or understanding necessary to evaluate complex energy market pricing trends. At NYSEG Solutions, we strive to make energy options more understandable so you can make an informed decision.

As a leading Energy Services Company (ESCO), we serve the entire spectrum of customers from residential to large commercial/industrial. We provide standard and custom rate options that satisfy a wide variety of needs and expectations.

While some customers actively manage their energy decision by comparing offers, evaluating market trends, and speaking with experts, many others depend upon NYSEG Solutions. Our research has shown that although price stability is important, other factors such as flexibility and environmental responsibility often factor in.

When shopping for electricity, consider what your key objectives are. Whether it is value, price stability, environmental responsibility, or peace of mind, knowing your expectations plays a large role in choosing the electricity supply product that is right for you.

Our standard offers have key attributes that make them desirable:

- *Fixed Price Electricity Supply Plan* provides price stability in rising or uncertain market conditions. Regardless of energy market trends throughout the year, the price per unit you pay stays the same for 6, 12, 16, or 24 months.
- *Market Price Electricity Supply Plan*: Your rate will rise and fall with the market.
- *Blend50 Electricity Supply Plan* combines 50% market and 50% fixed rate options. Receive the benefits of both market flexibility and price stability.
- **Green Energy** can be purchased at levels of 50% and 100% and can be added to any of the three options listed above.

At NYSEG Solutions, we are continuously expanding our product offers and improving our products and features to better meet the demands of our customers. The global energy market is a fast-paced environment, and we take our responsibility to our customers seriously by bringing you useful information and products that have value.
