

Market Price Trend of Electric Supply for Central and Upstate New York

This graph represents the 30-day average electric supply price per kilowatt-hour for a typical residential /small commercial customer located in Central and Upstate New York. These prices are based on the New York Independent System Operator's Day Ahead Market hourly price and regional utility pricing information.

Although this graph provides an indication of recent market trends, it does not attempt to predict long term or future market trends.
